Agentforce Hi! I'm Agentforce, an AI agent designed to help with product questions, troubleshooting, and feature setup. I can assist you directly or help you connect with additional support when needed. What can I help you with today?

Guest In the messaging setting, I cannot change the warning time of "Warn customers before inactivation" from 4 minutes to 2 minutes.

04/16/2026 09:39 AM GMT

Agentforce It seems that the "Warn customers before inactivation" setting allows you to configure the warning time before a session is marked inactive.[1] However, there might be restrictions or specific steps required to adjust this setting.

Here are some key points:

- The warning time can be set in the "Messaging Settings" page under the "Customer Inactivity" section.

- You can select the number of minutes before showing the warning to the customer. For example, setting it to 4 minutes will show the message 4 minutes before the session inactivates.

[1]

- Ensure that the "Warn customers before inactivation" option is enabled, and the warning time is within the allowed range.

For more detailed guidance, you can refer to the following resources:

- [Update Service Cloud Messaging Channel Settings](https://help.salesforce.com/s/articleView?id=service.livemessage_modify_channel_settings.htm&type=5&release=260.0.0)

- [Warn End Users Before Automatically Inactivating Their Messaging Session](https://help.salesforce.com/s/articleView?id=release-notes.rn_messaging_byoc_inactivation_warning.htm&type=5&release=258.0.0)

Does this help, or would you like assistance with a

specific step?

Guest

I still cannot change it

Agentforce

If you're unable to change the warning time despite following the steps, here are some troubleshooting tips:

1. ****Check Permissions****: Ensure you have the necessary permissions to modify the "Messaging Settings" in your Salesforce org. You might need admin-level access.
2. ****Allowed Range****: Verify that the time you're trying to set (e.g., 2 minutes) is within the allowed range for this setting. Some settings might have a minimum or maximum limit.

3. ****Status-Based Capacity****: If "Status-Based Capacity" is enabled in your org, it might conflict with the "Customer Inactivity" settings. Check if this feature is active and consider disabling it temporarily to make the change.

4. ****Browser Cache****: Clear your browser cache or try making the change in an incognito/private browsing window to rule out any caching issues.

5. ****Save Changes****: After making the adjustment, ensure you click "Save" to apply the changes.

If none of these steps resolve the issue, it might be a technical limitation or a bug. Would you like me to assist in creating a support case for further investigation?

04/16/2026 09:40 AM GMT

Guest Please create a case.

Agentforce I can help create a case for the following org. If you'd like to create a case for a different org, please feel free to let me know.

****Account****

- ****Product:**** core

- ****Org Name:**** PT Indosat Tbk

Could you please share as much detail as possible about the problem you're experiencing? It would be really helpful to know when the issue started, who or what it's impacting (e.g., specific users, processes, or systems), and any error codes or messages you're seeing.

04/16/2026 09:41 AM GMT

Guest I will attach the issue on the case.

Agentforce I understand that this issue is impacting your work. Do you have time to chat live with a support rep now, or would you rather I submit a case for them to review and get back to you?

Screenshot 2026-04-16 at 4.41.11 PM.png

Guest I can't change from 4 to 2 minutes.

04/16/2026 09:46 AM GMT

Priya A Hi Ocky

Priya A I hope you are doing well.

Priya A Please allow me 2-3 min to check on your concern

04/16/2026 09:52 AM GMT

Priya A Thankyou for your patience

04/16/2026 09:53 AM GMT

Priya A I have tested the same in my demo org and it seems that

Priya A The 4-minute minimum for the "Warn customers before inactivation" warning time is a hard-coded limit in Salesforce Messaging Settings. This cannot be changed to 2 minutes.

Priya A With that, would there be anything else I can help you with for now?

04/16/2026 10:01 AM GMT

Guest How can we change it? Because this is a requirement from my business user

04/16/2026 10:02 AM GMT

Priya A Unfortunately, the 4-minute minimum for the inactivity warning is a fixed setting in Salesforce. You can still customize the warning message to meet your business needs within this limit.

either you need to completely customize it using LWC and apex

04/16/2026 10:04 AM GMT

Guest Can you guide me on customize using LWC and apex?

04/16/2026 10:05 AM GMT

Guest a reference will be helpful

Priya A Since this is customization which is completely out-of-scope for us as a support

04/16/2026 10:08 AM GMT

Priya A you need to create apex class which will have the logic to capture the customer inactivity and based on the customer unresponsiveness you can show the warning messaging using LWC component.

04/16/2026 10:09 AM GMT

Guest Please provide me a helpful reference for doing this.

04/16/2026 10:10 AM GMT

Priya A Can we have a screen meet for now?

04/16/2026 10:11 AM GMT

Guest I know Apex and LWC, but implementing the customer inactivity is different

Guest Yes we can

04/16/2026 10:12 AM GMT

Priya A Okay

04/16/2026 10:13 AM GMT

Priya A [Meeting Link](<https://orgcs.my.site.com/>)
